About Meto-Fer Automation

Meto-Fer Automation is your worldwide solution to industrial automation. Notable products include a full line of conveyor systems; linear belt pallet transfer systems (MP), and linear pallet over / under systems.

Our complete line of quality automation components includes linear slides with air cylinder, ball screws or timing belts, alignment slides, grippers, rotary actuators, elastomer - oil cushions, flow controls, height gauge controls, suction cups, mounting brackets, stands and adapter plates, precision stop system with sensing elements, electronic sensors, spring feeders, shaft hoppers, and modular pick and place units.

Meto-Fer products are engineered to provide long lasting trouble-free performance.

Technical data:

- Stroke steplessly adjusted by built in patented stop screws with fine threads.
- The stop screws can be fitted with patented sensing elements. (see section "Stop Screws with plug-in sensing elements").
- End position damped with adjustable oil cushions.
- Designed for high operating rates / long life (expected life 20 million cycles)
- Seal repair kits available
- Linear ball bushings.
- Operating medium
- Operating pressure
- Repeatability
- Air connection

Intermediate position kit for LH

Description:

The intermediate stop operates via a cylinder introducing a robust stop slide into the path of the horizontal units rear adjustable flange bracket to that is attached the stop screw and oil cushions. This stop assembly can be reversed to operate in either the forward or reverse mode. More than one intermediate stop may be fitted, minimum distance between them 30 mm. They must all operate in the same direction.

The intermediate position can be utilized both in forward or reverse modes.

Linear Unit LM-26-RW Type S

Ball Screw, Twin Rail Positioning (Zero Backlash)

Sensor: IM-008-NS-U2L (NPN)
IM-008-PS-U2L (PNP)

Additional sensor and cables may be found in the Sensor Catalog.

Motor Flange:

The motor flange is mounted with four M4 screws and serves simultaneously to secure the double race thrust bearing. Standard flanges are available for stepper motors as accessories. Flanges for DC-Motors are manufactured upon request. Please include a sketch of the desired motor pattern.

Order No. Motor Flange for LM-26-RW

Coupling:

It is recommended to mount a high torque flex coupling between motor and unit.

Order No. Coupling for LM-26-RW Motor shaft \varnothing . . . mm

Inertial mass "J"

The listed inertial mass "J" reflects the entire unit including the coupling (motor not included).

At a stroke of 25mm: $J = 0.30 \text{ kgcm}^2$

J increases per additional 25mm stroke by 0.012 kgcm^2

F5 is dependent upon motor torque Md:

$$\text{By pitch 5mm: } \frac{Md [\text{Ncm}]}{0.08} = N \quad \text{max. allowed } 1000 \text{ N}$$

Ball Screw:

Rolled ball screw, ISO Class 7 (DIN 69051)

Zero clearance ball screw nut

Bearing of the Ball Screw:

Precision ball bearing, axial play = $0.007 - 0.024 \text{ mm}$.

The units can be used as X-Y Tables:

Ball Screw (anti-backlash), Twin Rail

Linear Unit LK-100-RWA

Ball Screw, Twin Rail

Sensor Order No. IM-008-NS-U2L (NPN)
IM-008-PS-U2L (PNP)

Additional sensor and cables may be found in the Sensor Catalog.

Motor Flange:

The motor flange is mounted with M4 screws and also secures the double race thrust bearing. Standard flanges are available. Please include a sketch of desired motor pattern.

Order No. Motor Flange for LK-100-RWA

Coupling:

It is recommended to use a high torque flex coupling.

Order No. Coupling for LK-100-RWA Motor shaft ø . . . mm

Inertial mass "J"

The listed inertial mass "J" reflects the entire unit including the coupling (motor not included).

At a stroke of 25mm: J = 0.23 kgcm²

J increases per additional 25mm stroke by 0.005 kgcm²

F5 is dependent upon motor torque Md:

$$\text{By pitch 5mm: } \frac{Md \text{ [Ncm]}}{0.08} = N \quad \text{max. allowed 1000 N}$$

Ball Screw:

Rolled ball screw, ISO Class 7 (DIN 69051)

Ball screw nut (anti-backlash)

Ball Screw Bearing:

Precision ball bearing, axial play = 0

LK160-ZR-16	0-1600	2000	126.8 lb (57.5 kg)

¹ Without Motor

Technical data:

- Timing belt drive
- Self supporting solid Aluminum extrusion
- High load capacity as a result of ball bearings on hardened guide rails
- High speed up to 2.5 m/sec (98.4"/sec)
- High repeatability 0.05 mm (.002")
- High resolution 0.05 mm (.002")
- High cycle rate: The standard motor can be loaded up to 9 Nm (79.65 lb. in) in start-stop cycling when using forced ventilation
- Overtravel switches in both end positions, plus mechanical shock absorbers
- Home position switch
- Easy mounting due to dovetail groove in extrusion
- Stroke per turn 125 mm

Order No.

Rotary Actuators MD

Features:

- Backlash free
- Ball bearings
- External stops

Model A (MD 20)

Model V (MD 20)

Model B (MD 12)

MD51 / 180B1, with oil cushion

Model S (MD 12)

Position of the shaft by MD12, MD20, MD32

Position of the Stop screw by MD12, MD20, MD32

Angle of rotation: 0 – 60° Stop screw in Pos. B
 Angle of rotation: 60 – 90° Stop screw in Pos. A

Position of the Stop screw by MD 51

Angle of rotation: 0 - 45° Stop screw in Pos. A
 Angle of rotation: 45 - 90° Stop screw in Pos. B

Rotary Actuator MD 12

Model S

Type	A	B	C	Angle of rotation	Air consumption for each double stroke at 5 bar	Weight (lb (kg))
MD 12/ 90 S	74	48	40	90°	.001 scf (0.02 NL)	.55 (0.25)
MD 12/180 S	105	60	60	180°	.002 scf (0.04 NL)	.66 (0.30)

Max. load radial to shaft: 67 lb (300 N)

Max. load axial to shaft: 67 lb (300 N)

Torque at 72.5 psi (5 bar) : 3.36 lb.in (0.38 Nm)

Order No. MD 12/ 90 S
MD 12/180 S

Model A

Stop screw AS 08/40

Type	Angle of rotation	Air consumption for each double stroke at 72.5 psi (5 bar)	Weight
MD 12/ 90 A	0 - 90°	.001 scf (0.02 NL)	.73 lb (0.33 kg)
MD 12/180 A	0 - 180°	.002 scf (0.04 NL)	.79 lb (0.36 kg)

Max. load radial to shaft: 67 lb (300 N)

Max. load axial to shaft: 67 lb (300 N)

Repeatability: +/- 320 Arc sec

Torque at 72.5 psi (5 bar) : 3.36 lb.in (0.38 Nm)

Order No. MD 12/ 90 A
MD 12/180 A

Model B

Stop screw AS 08/40

Type	Angle of rotation	Air consumption for each double stroke at 72.5 psi (5 bar)	Weight
MD 12/ 90 B	0 - 90°	.001 scf (0.02 NL)	.77 lb (0.35 kg)
MD 12/180 B	0 - 180°	.002 scf (0.04 NL)	.88 lb (0.40 kg)

Max. load radial to shaft: 34 lb (150 N)

Max. load axial to shaft: 54 lb (240 N)

Repeatability: +/- 320 Arc sec

Torque at 72.5 psi (5 bar) : 3.36 lb.in (0.38 Nm)

Order No. MD 12/ 90 B
MD 12/180 B

Technical data:

- Built in patented stop screws with fine threads provide for stepless adjustable angle of rotation.
- The stop screws can be fitted with patented sensing elements (see section "Stop Screws with plug-in sensing elements").
- Intermediate position can be added.
- Designed for high operating rates and long life.

- Operating medium: Compressed air or hydraulic oil
- Operating pressure: 43.5 - 116 psi (3 - 8 bar)
- Air connection: M5

Rotary Actuator MD 12/180 H

Rotary actuator with hollow shaft

Type	Angle of rotation	Max. load radial to shaft	Max. load axial to shaft	Torque at 72.5 psi (5 bar)	Air consumption for each double stroke at 72.5 psi (5 bar)	Weight	Order No.
MD 12/180 H	0–180°	337 lb (1500 N)	34 lb (150 N)	4.07 lb.in (0,46 Nm)	.002 scf (0,04 NL)	1.65 lb (0,75 kg)	MD 12/180 H

Technical data:

- Built in patented stop screws with fine threads provide for stepless adjustable angle of rotation.
- The stop screws can be fitted with patented sensing elements (see section "Stop Screws with plug-in sensing elements").
- Intermediate position can be added. (see sheet 3.051)
- Designed for high operating rates and long life.

- Operating medium
- Operating pressure
- Repeatability
- Air connection

Compressed air or hydraulic oil
43.5 - 116 psi (3 - 8 bar)
± 190 Arc sec
M5

Rotary Actuator MD 12 D/180 H

Rotary actuator with hollow shaft and 2 piston

Type	Angle of rotation	Max. load radial to shaft	Max. load axial to shaft	Torque at 72.5 psi (5 bar)	Air consumption for each double stroke at 72.5 psi (5 bar)	Weight	Order No.
MD 12 D/180 H	0–180°	337 lb (1500 N)	34 lb (150 N)	8.14 lb.in (0,92 Nm)	.003 scf (0,08 NL)	2.09 lb (0,95 kg)	MD 12 D/180 H

Technical data:

- Built in patented stop screws with fine threads provide for stepless adjustable angle of rotation.
- The stop screws can be fitted with patented sensing elements (see section "Stop Screws with plug-in sensing elements").
- Intermediate position can be added. (see sheet 3.051)
- Designed for high operating rates and long life.

- Operating medium
- Operating pressure
- Repeatability
- Air connection

Compressed air or hydraulic oil
43.5 - 116 psi (3 - 8 bar)
± 190 Arc sec
M5

Rotary Actuator MD 12/90V

Rotation:	0-90 degrees
Max Load Radial To Shaft:	34 lb (150 N)
Max Load Axial To Shaft:	54 lb (240 N)
Repeatability:	±320 ARC SEC.
Torque:	3.36 lb IN (.38 Nm)
Operating Medium:	compressed air or hydraulic oil
Operating Pressure:	43.5-116 PSI (3-8 bar)
Air Connection:	M5
Air Consumption For Each Double Stroke:	0.001 scf (0.02 NL)
Weight:	0.77 lb. (0.35 kg)

Order No.: MD12/90V

Rotary Actuator MD 12/180V

Rotation:	0-180 degrees
Max Load Radial To Shaft:	34 lb (150 N)
Max Load Axial To Shaft:	54 lb (240 N)
Repeatability:	±320 ARC SEC.
Torque:	3.36 lb IN (.38 Nm)
Operating Medium:	compressed air or hydraulic oil
Operating Pressure:	43.5-116 PSI (3-8 bar)
Air Connection:	M5
Air Consumption For Each Double Stroke:	0.002 scf (0.04 NL)
Weight:	0.88 lb. (0.40 kg)

Order No.: MD12/180V

Technical data:

- Built in patented stop screws with fine threads provide adjustable angle of rotation.
- The stop screws can be fitted with patented sensing elements (see section "Stop Screws with plug-in sensing elements")
- Designed for high operating rates

Rotary Actuator MD 20/360

Type	Angle of rotation	Max. load radial to shaft	Max. load axial to shaft	Torque at 72.5 psi (5 bar)	Air consumption for each double stroke 72.5 psi (5 bar)	Weight
MD 20/360	0–360°	337 lb (1500 N)	34 lb (150 N)	7.26 lb.in (0,82 Nm)	.006 scf (0,17 NL)	4.0 lb (1,8 kg)

Order No.
MD 20/360
MD 20/360-1 end cover for oil cushions or elastomer cushions

- Technical data:**
- Built in patented stop screws with fine threads provide for stepless adjustable angle of rotation.
 - The stop screws can be fitted with patented sensing elements (see section "Stop Screws with plug-in sensing elements").
 - End position can be damped with adjustable oil cushions.
 - Designed for high operating rates and long life.
 - Operating medium Compressed air or hydraulic oil
 - Operating pressure 43.5 - 116 psi (3 - 8 bar)
 - Repeatability ± 294 Arc sec
 - Air connection M5

Cushions page 5.001

Rotary Actuator MD 20/180V

Rotation:	0-180 degrees
Max Load Radial To Shaft:	40 lb (180 N)
Max Load Axial To Shaft:	67 lb (300 N)
Repeatability:	±200 ARC SEC.
Torque:	9.74 lb IN (1.1 Nm)
Operating Medium:	compressed air or hydraulic oil
Operating Pressure:	43.5-116 PSI (3-8 bar)
Air Connection:	M5
Air Consumption For Each Double Stroke:	0.004 scf (0.12 NL)
Weight:	2.6 lb. (1.20 kg)

Order No.: MD20/180V
MD20/180V1 WITH END COVER FOR OIL OR ELASTOMER CUSHIONS

Technical data:

- Built in patented stop screws with fine threads provide adjustable angle of rotation.
- The stop screws can be fitted with patented sensing elements (see section "Stop Screws with plug-in sensing elements")
- End position can be damped with adjustable oil cushions. (OB15/10L) or Elastomer (KB08)
- Designed for high operating rates

Rotary Actuator MD 32/180V

Rotation:	0-180 degrees
Max Load Radial To Shaft:	124 lb (550 N)
Max Load Axial To Shaft:	169 lb (750 N)
Repeatability:	±150 ARC SEC.
Torque:	31.86 lb IN (3.6 Nm) 72.5 PSI (5 bar)
Operating Medium:	compressed air or hydraulic oil
Operating Pressure:	43.5-116 PSI (3-8 bar)
Air Connection:	G 1/8"
Air Consumption For Each Double Stroke:	0.013 scf (0.37 NL) 72.5 PSI (5 bar)
Weight:	5.9 lb. (2.70 kg)

Order No.: MD32/180V
MD32/180V1 WITH END COVER FOR OIL OR ELASTOMER CUSHIONS

Technical data:

- Built in patented stop screws with fine threads provide adjustable angle of rotation.
- The stop screws can be fitted with patented sensing elements (see section "Stop Screws with plug-in sensing elements")
- End position can be damped with adjustable oil cushions. (OB15/10L or OB12/20) or Elastomer (KB08)
- Designed for high operating rates

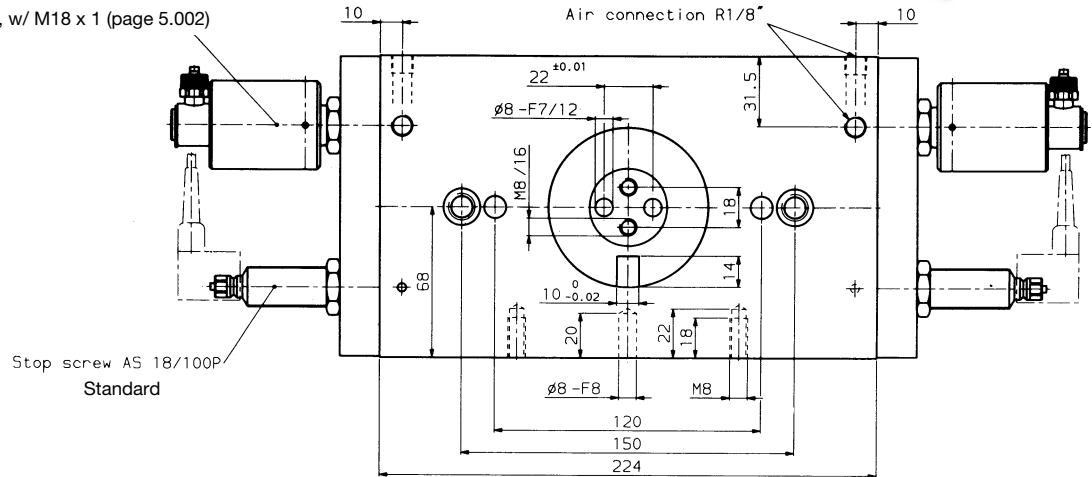

Type	Angle of rotation	Max. load radial to shaft	Max. load axial to shaft	Torque at 72.5 psi (5 bar)	Air consumption for each double stroke at 5 bar	Weight

Angle Loader WL

Individual angle loader components are available in various versions and should, therefore, be ordered separately. Components can be determined with the aid of the following list according to the description.

Description	Sheet	Description	Sheet
KOB	Compensation reservoir5.001	SD 01.001	Stand base6.002
* KS...	Conical bar	SD 01.005	Mounting plate6.002
LH...	Linear unit1.001	SE 01.001	Stand base6.001
MD 32/180 B...	Rotary drive3.031	SE 01.004	Mounting plate6.001
MD 51/180 B...	Rotary drive3.041	VE...	Vertical unit1.011
* MZ 12	Mechanical gripper4.001	ZB 02.007	Plate
OB 15/10L	Oil cushion5.001	ZB 11.021	Plate
OB 12/20	Oil cushion5.001	ZB 12.005	Flange (MD 32)
Pillar ø 40 x...	Pillar6.002	ZZ 12...	Gripper cylinder4.001

* KS, MZ 12 und ZZ 12 can be ordered as NW... (Sheet 4.001).

The oil cushions and the compensation reservoir for the rotary drive have to be ordered separately.

Page 5.001

Plate
Order No. ZB 02.007

WL 32

The oil cushions for the rotary drive must be ordered separately. The compensation reservoir is included with the linear unit.

Plate
Order No. ZB 11.021

WL 51

**GRIPPERS: ANGULAR, SEMI-PARALLEL, 180° ANGULAR, PARALLEL,
THREE FINGER ANGULAR**

KOB 50

OB 12/20

OB 15/10K and OB 15/10L

The oil cushions are intended to absorb the kinetic energy of a moving mass and arrest the momentum in a progressive manner. They provide stable motion of slide ways and rotary units by bringing them to a gentle stop without undue wear on the stops. The oil cushion should be adjusted such that it is not used as the final stop, only the stop screws are designed for this purpose.

OB 9/10 and OB 10/10

Order No. OB 9/10

Order No. OB 10/10

Order No. KOB 50

Order No. OB 15/10 K

Order No. OB 15/10 L

Order No. OB 12/20

Order No. OB 15/20

Note: The cushion must not be used as a final stop.

Installation of the oil cushion in the cylinder

Order No. MU 01.008

Function of the cushion

The cushion is like a hydraulic cylinder with a built in one way restrictor. It is charged with oil from the compensating reservoir. When a mass approaches and depresses the piston rod the oil is displaced through an orifice plate which reduces progressively with the movement. The displaced oil returns to the reservoir at high speed. The reservoir must not be filled more than half full. Use light hydraulic oil. Ensure all trapped air is expelled from the cushion by cycling. An air supply of 43.5–87.0 psi (3–6 bar) must be connected to the top of the reservoir to keep the cushions charged. Provision is made for up to 4 cushions to be connected, more may be connected provided the kinetic energy generated does not cause over heating. The only adjustment is by varying the point of initial contact. The mounting clamp must be robust and able to absorb three times the power of the cushion. (Momentum = $Ke / \text{stop distance}$). Collision speed should be 0.4–3.8 m/s.

Type	Momentum KE/s in lb (N)	Force KE in lb. in (Nm)	Max. No. double strokes per min	Max. output in Watt

Suction refers to components with a flat ground surface at max. vacuum of -10.2 psi ($-0,7$ bar).

Technical data:

- Temperature range -4° to 158° F (-20° to 70° C)
- Oil-resistant yes
- Acid-resistant no
- Hardness 60 Shore
- Good mechanical properties

Air filter (vacuum)

In locations where dirt particles can be picked up by vacuum generators it is recommended that a filter is used.

Replacement filter **Order No.** VA 06 E

Flow control valve DV

Adjustable, with swivel connector

These valves are used to regulate exhaust airflow.
For example: to control the piston on double-acting cylinders.
An adjustment screw allows variable flow in one direction (arrow) and permits air to flow freely in the opposite direction.
These space saving valves mount directly into the cylinder port.
The body can be rotated 360° for optimum alignment.

Hand slide valve HV

Order No. HV-R1/4"

X-Y Axis Alignment Slides (X-Y stage)

The X-Y Axis Alignment Slide has the advantage of one side operation for both axes. This is especially beneficial for use in small spaces. These X-Y slides are being used extensively in inkjet printers and other standard printer applications. Very fine adjustments are possible from one side by means of an adjusting screw, allowing adjustment in both directions as well as locking of the spindle.

Order No: KK-8.5-4.0

Adjusting Range: X-Axis $\pm 8.5\text{mm}$ 1mm per one revolution
Y-Axis $\pm 4.0\text{mm}$ 1mm per one revolution

Max Load: F=200N
Mx=1.5Nm
My=0.5Nm
Mz=1.0Nm

Angularity: Z-Axis $\pm 3^\circ$

Stands and Modular Mounting Brackets and Adapter Plates

To achieve peak operation of precise, dynamic handling systems, a robust, vibration resistant supporting structure is essential. Only with such a structure is it possible to exploit the high repeat accuracies and speeds of the individual elements.

Our ground, chromium plated single and double columns allow precise, simple clamping and adjustment of mounting plates and transverse connectors. Through the use of these standard modular components, a wide range of mounting arrangements can be easily configured.

Product features:

- Chrome-Plated Shafting, diameter 40 mm
- Standard Lengths or custom lengths available
- Simple, Precise and Secure
- Easy height adjustment
- No need to design; use standard modular assembly blocks
- Precision components
- Grey anodized mounting blocks
Order 20 pc. or more choose your color; black, red, green, blue, purple, or gold)

Technical drawing of a pillar. The drawing shows a vertical cylinder with a central hole. The length is labeled as $L \pm 1$ and $65 - 1,500\text{mm}$. The outer diameter is labeled as $\text{Ø}50 - g6$ and the inner hole diameter is labeled as $\text{Ø}26$.

3D perspective view of the pillar, showing its cylindrical shape and central hole.

Washer

Order Number
NO 03.008

Technical drawing of a washer. The drawing shows a square washer with a central hole. The width is labeled as 30, the height is labeled as 20, and the hole diameter is labeled as $\text{Ø}8.5$. A side view shows a thickness of 5.

3D perspective view of the washer installed on a mounting bracket. The washer is labeled as NO03.008 WASHER.

Automated Tray Changer

(Transfer and tray storage unit AP)

Description

The transfer and tray storage unit is used for automatic loading/unloading of trays.

The tray to be loaded is singled out on the tray stack downward and is brought into the loading position by the electrical drive unit.

The advance of the trays is programmable to your choice and programs can be stored in the controller unit.

The loaded trays are stacked onto each other and lowered within the unit downward to the transfer unit.

This transfer unit moves the whole stack of trays out of the system.

This unit is designed to allow the procedure described above also to be carried out in reverse order.

This unit is equipped with an individual controller, which also allows the controlling of the handling unit.

In addition, this transfer and tray storage unit can be equipped with any automation component of modular design within our range of products. The parts can then be loaded/unloaded individually or serially.

Typical applications are: difficult parts to sort out, or parts which must not be scratched, e.g. cosmetic products.

Technical Data:

- Tray size 400 x 600 mm (other dimensions are also possible)
- Tray changing time approx.. 5 seconds
- Stack height 400 mm
- Total weight of tray stack approx.. 30 kgs

Shaft Hopper WM-01

Order No. WM-01 - . . .

O = No sensors
N = Sensors NPN (M8x1)
P = Sensors PNP (M8x1)

Section B-B

View A

The shaft hopper separates and prepositions shafts with a diameter from 6 to 26mm. The length of the work pieces can range from 56 to 254mm. (2,2" to 10")

Parts must have the same length and the same orientation. A simple shifting of the internal partitioning adjusts to a different work piece length.

A stepped mechanic that moves up and down separates the shafts. It is driven by a pneumatic cylinder. The uppermost step can be used as an unloading position for the parts; but it is also possible to convey the shafts to another suited installation (for example transport device) without using an unloading device.

The shaft hopper is equipped with a level measuring device and a control for the unloading position. A flap at the side allows to magazine even short shafts without problems.

Weight of the hopper approx. 44 lb (20 kg)

Spring feeder FG

For disentangling and feeding of cylindrical springs with air.

NOTE: Each spring must be checked out individually for feed suitability. About 0.3 liter (.33 quarts) of regular production springs are needed for evaluation.

SPRING:

- Outer spring diameter 2-8mm (0.0788" - 0.3152")
- Length up to 30mm (1.182")
- Special version up to \varnothing 18mm (0.708")
- Length 5-45mm (0.196" - 1.771")

Technical data:

- Simple and quick refill of springs
- *Hopper for additional bulk quantity of springs (see back page)*
- 1-6 outputs (dependant on feed rate, dimension and form of spring)
- Rate per output: up to 100 PCS/ min.
- Air connection: R 1/8"
- Operating medium: compressed air / oil free
- Operating pressure: 2-6 bar (30-90 psi)
- Air consumption: per operating cycle at 72.5 psi (5 bar): .883 scf (25 NL)
- Volume: 0,5 litre (.55 quarts)
- Weight: 30 kg (66.2 lb)

The unit is supplied with a matching nozzle, tube mount and 2-meter tube.

CONTROL UNIT:

The control unit is equipped with an automatic on / off (FG will switch on only as required)

Voltage: 24 volts DC

Order No.

- FG -
- A = valves, regulator, compl. with tubing, without ring initiator
 - B = valves, regulator, compl. with tubing with control unit, with ring initiator (1 pc. per output)
 - Number of outputs 1-6

Ring initiator version PNP

Order No. IR PSK-IBS

Ring Diameter (I.D.)

Single escapement EF for springs and cylindrical pins

The single escapement must be matched to the spring diameter.

Technical data:

- Outer spring diameter 2-8mm (0.078" - 0.315")
- Spring length 5 to 40mm (.196"-1.574")
- Call us for details about your custom size
- Air connection M5 Operating medium: compressed air/ oil free
- Operating pressure: 2-6 bar (30-90 psi)
- Air Consumption: per operating cycle at 72.5 psi: 0.014 NL
- Weight: 0,85 kg (1.87lb)

Order No. EF 01.000

Hopper FG

Available in two models, the Hopper holds a bulk quantity of springs and easily facilitates automatic refilling of the Spring Feeder.

MODEL – S

This model does not have a quick empty feature.

Order No.: FG-Hopper-S

MODEL – L

FG-Hopper-L is recommended when your application requires feeding various types of springs with the same spring feeder. Model – L also provides a Quick-Empty feature, by simply pulling the drawer.

Order No.: FG-Hopper-L

NC-Winding Machine FW-01

for spiral torque springs

Example of a stripped coil

The Meto-Fer NC-winding machine produces spiral springs with legs, for use in torquing applications, and coiled resistance wires directly from a spool. The machine can be integrated directly into an assembly installation, or used as a stand-alone machine.

A traversing spindle is used to wind the springs. Two programmable DC motor driven CNC-axes drive the winding process. All other movements are controlled pneumatically. The CNC control unit is an integral part of the spring winding machine.

Tooling adjusts to accommodate different coil lengths. Simple tooling changes accommodate different coil diameters and leg lengths. If necessary, additional tools can be used to bend and form the legs of the springs. Please note that this standard machine is optimized to produce spiral springs with legs, and is not intended to be used to produce compression springs or tension springs.

Technical Data:	Smallest wire diameter	approx.	0.2 mm
	Largest wire diameter	approx.	1.5 mm (depends on torque)
	Smallest coil diameter (centerline to centerline)	approx.	2 mm
	Largest coil diameter (centerline to centerline)	approx.	30 mm (depends on torque)
	Minimum length of legs		1/2 of outside diameter
	Maximum length of legs		50 mm
	Maximum total length of both legs		100 mm (legs 2 x 50 mm)
	Maximum length of coil		42 mm
	Nominal RPM of winding spindle		300 RPM
	Nominal torque		33.6 lb.in (3.8 Nm)
	Fast vertical motion of winding spindle		49.2 ft/min (15 m/min)
	Force of cutting tool		562 lb at 72.5 psi (2500 N at 5 bar)
	Pneumatic operating pressure		58 - 116 psi (4 - 8 bar)
	Electrical power requirements	approx.	1.341 hp (1 kW)
	Overall dimensions (Length x Width x Height)		1420 x 505 x 610 mm
	Weight	approx.	200 lb (90 kg)

Pick and Place Load Station

(with Vibratory Bowl Feeder)

Complete Pick and Place Station

- Linear Unit (LH), Vertical Unit (VE), Rotary Actuator (ZD12/180), Mechanical Gripper (ZZ12, MZ 12)
- Vibratory Feeder with incline track and Rotary Actuator with single escapement
- Standard modular components (no custom adapter plates needed)
- Stroke and rotation adjustable with stop screws (also used for output signal)
- Up to 25 million cycle times
- Seal / Bearing Kits available for all meto-fer components
- PLC for Pick and Place available

**For more information, call 412-488-3488; 1-888-METO-FER (1-888-638-6337)

NAMUR, PNP and NPN Information

NAMUR Proximity Switch:

NAMUR-proximity switches have 2 wires which are connected to the supply with a current limiting resistor. The value of the limiting resistor depends on the supply voltage. According to NAMUR, the limiting resistor has a value of 1kOhm at a supply voltage of 8.2V (Temp = +20°C (+68°F)).

When the load is activated, the current consumption of the proximity switch is small; i.e. the voltage drop over the sensor element is large.

When the load is not activated, the current consumption of the proximity switch is large; i.e. the voltage drop over the sensor element is small.

Caution: A serial mounting of NAMUR proximity switches is not allowed!

LOGIC Proximity Switch:

All logic proximity switches that are alternatively available in PNP or NPN version have 3 wires.

The PNP-output signal is measured between the PNP-output wire and the negative-voltage supply-wire (blue).

The NPN-output signal is measured between the NPN-output wire and the positive-voltage supply-wire (brown).

The parallel-, as well as the serial mounting of 3-wire or 4-wire proximity switches is allowed.

The maximum number of serial mounted proximity switches varies depending on the value of the supply voltage and is limited by the value of the respective voltage drop of the elements.

Precision Stop System With Sensing Element

For monitoring mechanical motions, Meto-Fer has a patented Stop System that provides fine stroke adjustment of the stop position and simultaneously provides an output in electrical, electronic, or pneumatic form to confirm that the stop position has been met.

Stop screw with locknut

Plug-in sensing element

Functional Principle

* Please note additional information on page 12 / 13

- The stop screw is used to adjust the mechanical end-position of the motion.
- The fine thread of the stop screw allows exact adjustment of the mechanical end position. The locknut secures the adjusted position.
- The stop screw contains a spring and hardened stop pin, which operates the attached sensing element when the pin is driven to the end position.
- The stroke of the hardened stop striker is 1.5 mm.
- This combination eliminates the need for a secondary sensor adjustment after the hard stop adjustment has been made.
- They come standard on all our rotary and linear actuators, or they can be integrated into your design as stand alone products whenever precision feedback and adjustment are required.

Stop Screw AS

Dimension					Part No.

F = force or load (N) $F = m \times a$
M = mass (kg) a = acceleration (m/s)

Marking of cables and connectors

Important: Sensors and cables have to be ordered separately. All the indicated part numbers of the sensors in the catalogue which do not have an incorporated cable refer only to the sensor - the corresponding cable is not included in this part-number

The corresponding cable has to be ordered separately according the following table.

Part-Number of cables which correspond to the Meto-Fer connector 01 and 02 (cable cross section: 0.14mm²)

straight plug	
ST-02G-3A-U2X	U2X=2m
ST-02G-3A-U5X	U5X=5m
ST-02G-3A-U9X	U9X=9m

Part-Number of cables which correspond to the Standard-Connector 10 (cable cross section: 0.25mm²)

straight plug (NAMUR / LOGIC)	right angle plug (90°) (NAMUR / LOGIC)	Length
ST-10G-3B-U2X	ST-10W-3B-U2X	U2X=2m
ST-10G-3B-U5X	ST-10W-3B-U5X	U5X=5m
ST-10G-3B-U9X	ST-10W-3B-U9X	U9X=9m

Part-Number of cables which correspond to the Standard-Connector 11 (cable cross section: 0.25mm²)

straight plug (NAMUR / LOGIC)	right angle plug (90°) (NAMUR / LOGIC)	Length
ST-11G-3B-U2X	ST-11W-3B-U2X	U2X=2m
ST-11G-3B-U5X	ST-11W-3B-U5X	U5X=5m
ST-11G-3B-U9X	ST-11W-3B-U9X	U9X=9m

Part-Number of cables which correspond to the Standard-Connector 30 (cable cross section: 0.25mm²)

straight plug (NAMUR / LOGIC)	right angle plug (90°) (NAMUR / LOGIC)	Length
ST-30G-4B-U2X	ST-30W-4B-U2X	U2X=2m
ST-30G-4B-U5X	ST-30W-4B-U5X	U5X=5m
ST-30G-4B-U9X	ST-30W-4B-U9X	U9X=9m

Height Gauge KV (precision sensing unit)

Application:

- Tolerance control with output signal for too short, acceptable, too long
- Check for failure
- Presence control

The height gauge KV is used for the control of two adjustable positions with a range from 0.03 to 5 mm.

Whenever precision feedback and adjustment are required.
Output signal; when the preset limiting values are reached.

Order No.

KV 01- ...

O-without proximity switches

A-with 2 inductive proximity switches IR-004-NS-U2L (NPN, normally open)

B-with 2 inductive proximity switches IR-004-PS-U2L (PNP, normally open)

C-with 2 inductive proximity switches IR-004-AX-U20 (NAMUR, analog)

*All proximity switches have molded cable, see page 6

Technical data:

- Control range is adjustable with two set screws (sensor position 1 and 2)
- Adjustable range: 0.03 - 5 mm (0.00118-0.196 inch)
- Spring force: 140 - 210 g (0.308-0.463 lb)
- Repeatability: +/- 0.03 mm (+/-0.00118 inch)
- Weight: 0.07 kg (0.154 lb)
- For horizontal and vertical applications

Linear Transfer System MP

Linear Pallet Transfer System Two-Belt System

Design considerations:

- Only a few modules are required to assemble a complex system
- A variety of standard modules are available
- The MP System supports manual, semi-automatic or fully automatic operation
- The MP System can be easily expanded and all modules can be entirely re-used
- The MP System facilitates fast and reliable transport of aluminum pallets
- Any number of manual work modules can be directly integrated into the main system

Switch Point

Pallets

- The pallets provide a platform for fixtures and coding system.
- Meto-Fer® offers a mechanical coding system ("MC").
- The positioning accuracy of the pallets is 0.02mm (standard).
Option: Positioning accuracy for pallet size up to 200 x 200 mm, 0.01mm.
- The wide range of pallets allows for optimal adaptation to your product.

Standard Sizes

Pallet Size AxB	C	D	Pallet Interchange Time (sec.)	Material
				Aluminum (AlMg4.5Mn No. 5083)
150x100	82	10	1.2	
150x150	120	10	1.2	
200x150	120	10	1.4

500x400	370	10	2.6	
500x500	470	10	2.6	
Option up to 1,500 x 1,000mm possible				

Recommendation for number of pallets per systems:

3 pcs. per station + an additional 6 pcs.

NOTE:
If using only manual work-
stations, index bushings are
not required. Please specify
when ordering.

Order No. for Pallets

MPA-010-xxx-xxx

① = Pallet Length in mm
② = Pallet Width in mm

Mechanical Coding System MC

The Coding System transfers information regarding the status of assembly, such as:

- acceptable / failure
- part present/not present
- status of process
- transportation destination (exit, straight forward)

Coding Block: Type MC-CB

This is the information carrier about the status of the work piece which circulates on the MP-System from station to station. In each coding block are 2 coding pins. One pin is for the "Set", the other for the "Read" and reserve. The mechanical coding system requires that each pallet is equipped with a minimum of one coding block. Several coding blocks can be mounted next to each other.

Order No. MC-CB-01-06

Coding Setter: Type MC-CS

The Coding Setter serves to "Set" and "Reset" of the coding pin. It consists of a single acting cylinder which is mounted to the MP-profile by an adapter. To "Set" the coding pin, the pallets have to be stopped.

Pallet Thickness—D	L	A
10	121	61.5

Air consumption per stroke 0.1 ml

Amount: 1 pc. per station

Order No. MC-CS-01-10 (for pallet thickness 10mm)

Code Reader: Type MC-CL

The code reader is used to read the coding pins. The reading is done by inductive proximity switch with LED display.

Pallet Thickness—D	L	A
10	102	42.5

Amount: 1 pc. per station

Order No. MC-CL-01-10 (for pallet thickness 10mm)

NOTE: Sensors and cables are not included with the pallet system and need to be ordered separately.

Sensor: Order No. IR-065-NS-10L (NPN) or IR-065-PS-10L (PNP)

Cable: Order No. ST-10W-3B-U2X (2m) ST-10W-3B-U5X (5m)

Positioning (Automatic Workstation)

- For accurate positioning, the pallets are lifted from the transport belts and positioned with pins/cones.
- The positioning accuracy is $\pm 0.02\text{mm}$ in the standard version. We offer options up to 200×200 pallet size with a positioning accuracy of $\pm 0.01\text{mm}$.
- The positionings can be fixed at any place over the entire length of the lateral transport without any mechanical modifications.
- 2 or more workstations can be set up per partial lateral transport.
- The pallets are cushioned in the end position.
- If required, positioning stations are available for:
 - access from underneath (working from below possible)
 - the pallet supported from underneath (press from above possible)
 - the pallet to be changed by quick exchange (short pallet changing times)

NOTE: Sensors (4 pieces) and cables are not included with the pallet system and need to be ordered separately.

Sensor: Order No. IR-008-NS-11L (NPN) or IR-008-PS-11L (PNP)

Cable: Order No. ST-11W-3B-U2X

Partial Transport Track

- A partial transport track consists of 2 equal length transport belts and a common drive with rubber coated drive pulley. The belts of the transport tracks can be separately tightened and exchanged.
- The drive can be fixed at any place of the partial track.
- In addition to standard lengths of partial tracks, special lengths between 300mm and 5000mm are available.
- Several stations can be mounted on a partial track.

$$\text{Track Length } L \approx (4 \times \text{Pallets Length}) + 200$$

Standard - Track Length

Pallet Length	Track Length	D	E	F	G	v* [mm/s]
100	1000	25	50	60	14	300

Manual Workstation “A”

“In Line”

- This workstation is “in line” assembled and fulfills all ergonomic and economical requirements.
- The transport track is mounted on a stand which is directly integrated into the assembly line.
- The arm- and feet rests are adjustable. The feet rest is coated with a slip resistant, black rubber.
- The pallets can be positioned with either manual or automatic workstations (Sheet 10.004).
- The throughput of the system can be influenced with this workstation. The working content should not exceed the throughput of the slowest automatic station.

Order No. for Manual Workstation A:
(without positioning)
